

Validation Method & Baseline Summary

OPTIONAL ATTACHMENT 2 · ListForge Order 54 · Eric Twitchell · 04 October 2026

PRE-CALL BASELINE Predictions are frozen. No call outcomes or independent company/contact verification have been used.

FCA · FIRST-CALL ACTIONABILITY 35 GREEN / 16 YELLOW / 0 RED A reasonable account/location call is not a verified connection.	NCSA · NAMED-CONTACT SEQUENCE 1 GREEN / 13 YELLOW / 2 RED 35 more records: INSUFFICIENT EVIDENCE.	SEQ · SEQUENCE CLASS 1 GREEN / 47 YELLOW / 3 RED Conservative person-sequence forecast.
--	---	---

Readout: the forecast separates “reasonable to call the business” from “supported named-person sequence.” The counts are predictions—not performance results, a target rate, or a universal data-quality score.

Method in brief • FCA: account/location first-call appropriateness. YELLOW means call to qualify a material entity or route question; RED needs positive evidence of a wrong/disconnected number or wrong entity. • NCSA: named-person, role, and route readiness under the provisional offer assumption. No named person = INSUFFICIENT EVIDENCE, not a bad account. GREEN requires affirmative evidence; role fit is conditional because the offer/ICP is unspecified. • SEQ: conservative named-contact sequence classification; entity contamination can trigger a separately explained SEQ RED while NCSA remains insufficient. • Signals: different-area-code ContactPhone is a route risk, not proof of error. LastReviewDate bands are Low ≤3 months, Medium 4–6, High ≥7; they temper confidence, not class by themselves.	Ten-call sample: different risk modes 01 · LF-31 Toast/platform entity contamination 02 · LF-23 Marriott boundary + HR contact 03 · LF-45 Helpdesk route + Talent Development role 04 · LF-04 Accessibility route + area-code mismatch 05 · LF-11 Unmapped Cheryl email/person 06 · LF-34 Shared Hotel ZaZa contact + liveness 07 · LF-28 Multi-location owner scope 08 · LF-43 Franchise scope + role 09 · LF-41 Toll-free route + Facilities role 10 · LF-38 Restaurant/category identity

What Eric should establish by phone

PHONE Does the listed number reach the right business/location?	LIVENESS Is that location operating at the listed address?	ENTITY Who operates it; are vendor decisions local, parent, franchise, or central?	CONTACT / ROUTE Is the named person current, is the stated role accurate, and does the route reach them?	AUTHORITY Is the contact involved in vendor decisions, and where does purchasing sit?
Call protocol Record factual answers separately by dimension. No answer/voicemail is unresolved; connection alone is not confirmation. Do not ask whether the business would buy or whether it likes Pipeline42. Do not edit the frozen predictions after calls.			After outcomes arrive Compare entity, contact/role, route, liveness, and actionability separately. Keep unresolved calls out of confirmed-error counts; report denominators. Formal outcome analysis waits for Eric’s ground-truth answers.	

Evidence basis: 51 ListForge rows and 51 Apollo rows. Cross-export agreement is consistency only—not independent verification. No external research or calls are represented here. Eric’s one-page Ground Truth Sheet is the companion attachment for collecting the test outcomes.
